Message from the MD

Technological advancements are now at an unprecedented rate and technology-driven businesses are achieving rapid levels of growth and profitability by taking full advantage of the plethora of opportunities presented by this development. With the pace at which businesses are becoming heavily IT-driven, most organizations face a dilemma of finding the right partners to handle the prerequisite I.T services for achieving their business objectives.

We understand how difficult it is to be in such a position and we would like to assure you that with us, you need not worry about this challenge anymore.

At Infostrategy Technology, we provide our clients with solutions that are streamlined to suit your diverse technological needs, achieve your business objectives, improve productivity, increase efficiency, and increase your bottom-line growth.

We are a breed of result-oriented and value-driven IT solutions provider, we excel at what we do and we look forward to creating a mutually beneficial and synergistic relationship with your organization.

Tomi Araromi
Managing Director

Who we are?

Infostrategy Technology (IST) is an Information, Communication and Software Technology firm incorporated in Nigeria and London with global Headquarters in Abuja.

Founded in 2003, we operate with a burning passion to transform the technology terrain of Nigeria and Africa by delivering value to

our clients through innovation; leveraging on cutting edge Information Technologies.

Our primary focus is to provide solutions and services to all sized organizations across all sectors of the economy; Individuals, SMEs, Government and Non Government organizations.

OUR VISION

“To Be The Preferred Technology Company”

OUR MISSION

- To provide the best solutions that exceeds the client's expectations and meets their increasing technology challenges and business demands.
- To consistently deliver fast and reliable services to our customers through experienced and motivated people aided by progressive technology.
- To generate exceptional returns to stakeholders.

Our Goal

To aid, substantiate and strengthen your competitive advantage in the market place by streamlining operations, incorporating creative designs and maximizing opportunities while delivering cutting edge solutions that puts profitability in close reach, not years away and mobile solutions.

iRecharge

iRecharge is a distributed vending platform for frequently used services such as Airtime, Internet Data, Electricity, Cable TV, Sports betting and for third party payments. iRecharge integrates seamlessly with service provider’s systems to provide vendors and end users with access to these services while opening up new revenue channels for transactional businesses.

iRecharge also operates a mobile money service which enables registered users to have access to financial services such as funds transfers between mobile money wallets and bank accounts, deposits into mobile money wallets (CashIn) and withdrawals (CashOut) from mobile money wallets at selected agent locations or even with just your phone number.

Our mobile money services can be accessed through the following channels:

-  The iRecharge Agent Network
-  The iRecharge mobile app on IOS, Android or Windows
-  The iRecharge *6606# USSD Code
-  www.irecharge.ng

Accelerate

Accelerate is a multifunctional omni-channel payment system that provides convenient and safe digital alternatives to tender and receive payments.

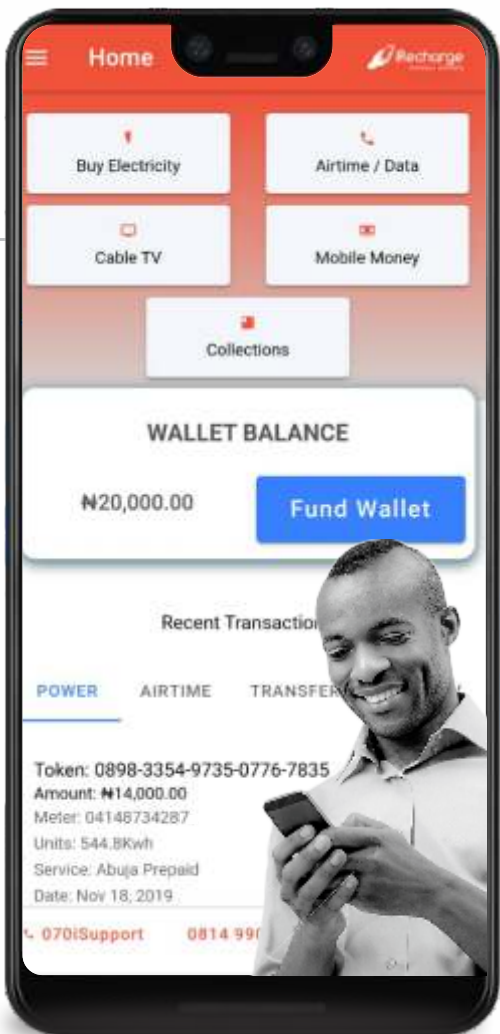

Services:

- a. **USSD Payments:-** Accelerate aggregates the USSD codes of all commercial banks and make it possible for customers to make payments for goods and services using their bank's USSD codes.
- b. **Bank Transfers as a Service:-** A unique bank account number is generated for every transaction which allows customers to transfer to that number as a means of payment for goods & services.
- c. **USSD Cash Out:** Customers can fund their wallet or collect cash from their bank account at merchant locations using bank specific USSD codes.
- d. **Instant Bank Transfer:**
 - i. Instant transfer to any bank account
 - ii. To mobile wallets
 - iii. To Phone numbers
- e. **Corporate Payment Solution:**
 - i. Accelerate provides a simple and efficient payment solution that automates payment process and collection for organizations and government from managing transactions, scheduling payments to reminders and reports.
 - ii. Helps you save on transaction charges and give the peace of mind that comes with clarity.
- f. **ePayment Gateways:** Enables the merchants charge purchase to the customer's credit/debit cards while providing a secured and convenient way for people to make payment.

- g. **Bill Payments as a Service**
 - i. Payments for electricity
 - ii. Cable TV
 - iii. Data /Internet
 - iv. Airtime
 - h. iRecharge POS Application

Access Channels

- 1 Mobile App
- 2 Desktop
- 3 Web
- 4 Whatsapp Chatbot (Imisi : 09096666612)
- 5 M-POS
- 6 USSD -*6606#

Supported Banks:

Adept

Connecting Utilities to the Financial System

Adept is a platform that enables utility providers generate account numbers for customers which can be used to make recurring bill payments like electricity and Cable TV.

It provides Discos with a cashless and card less payment alternative for receiving payments from their customers while providing them with multiple payment channels.

How it Works?

Adept incorporates an automated vending, reporting and verification system. Payments made for Prepaid meters automatically generates token and send to the designated phone number/email address upon receipt of payment.

For postpaid payment, a receipt is issued with a unique Transaction reference.

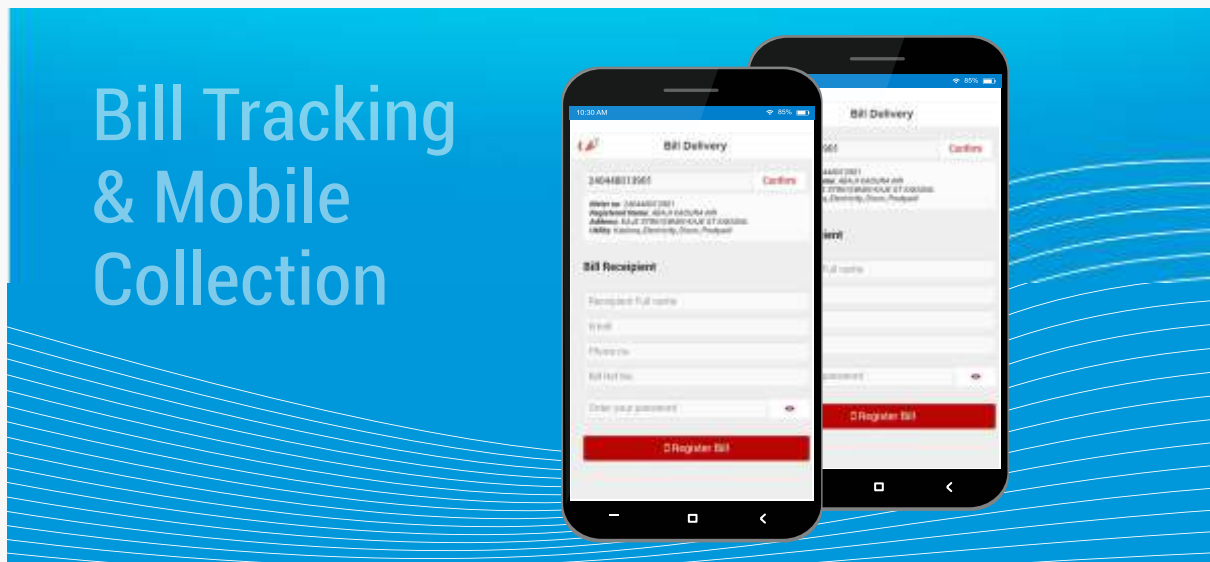

Clients will be provided with an interface to generate unique NUBAN account numbers to be paired with relevant product & services

Features

- ✓ Multiple services, one platform
- ✓ Low cost entry Access
- ✓ Instant fulfilment
- ✓ Convenience and Accessibility
- ✓ Bird eye view of the operations
- ✓ Register Agents/customers
- ✓ View and manage customer activities
- ✓ Manage settlements
- ✓ Transaction history/tracking
- ✓ Multiple access Points
- ✓ Transaction security

Bill Tracking and Mobile Collection (BTMC) Solution

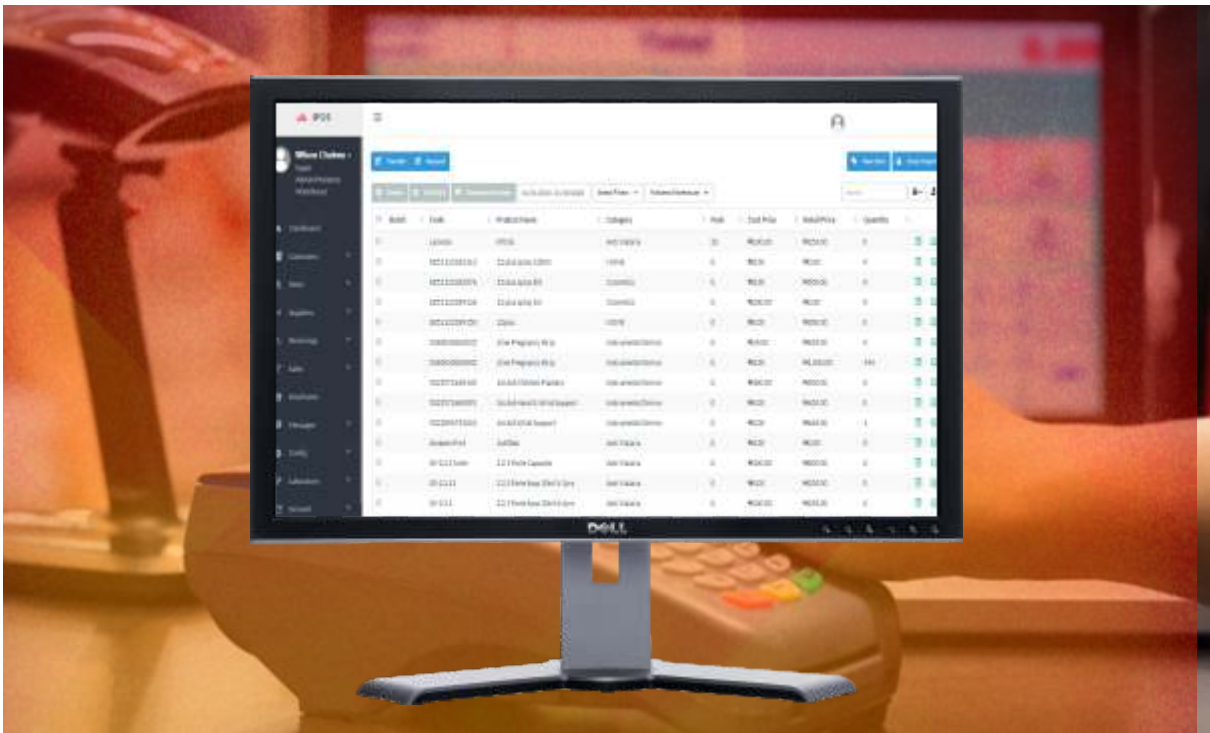

The solution is designed to monitor bill distribution for all metered Service providers such as Electricity DisCos, Independent Power Companies, Water Board, Refuse Management etc. by capturing geographical and critical information while creating more entry points for the payment of bills and penalties. It's primarily accessed using our 3 in 1 POS device.

The Bill Tracking and Mobile Collection (BTMC) is designed to aid with Loss Reduction, Revenue Generation through both bill and penalty payments, Customer Convenience and Transaction Security using the same platform.

This solution currently serves both online and offline customers through many access points and payment options. The Service provides real-time customer support and multilingual compatibility. This ensures that all bills are handed over properly to an occupant of the property. The details of the receiver such as delivery address, phone number and email address are captured. The application automatically picks the geo location of the bills delivered and matches it to inputted address. The Mobile Collections aspect of the solution enables designated staff to receive and receipt bill payments while moving around, either during the distribution of bills or enforcement. They are issued a receipt and will receive an SMS confirming the payment.

iPOS

iPOS is a custom retail management Software as a Service (SaaS) solution targeted at Pharmaceuticals and Retail businesses. It can be customized to suite the specific business needs of our clients and can be accessed online and offline when deployed on-prem.

iPOS' - Inventory Management Module

- iPOS inventory management module provides many intuitive ways for managing, tracking and correcting inventory stock ensuring your physical stock matches that of your database.
- The inventory management module of iPOS also takes care of product batches and their attributes such as serial number, manufacturing dates, expiry dates in your stock
- iPOS helps maintain the physical location of your products in your stores / warehouse to ensure easy and more convenient retrieval.

Stock auditing and monitoring:

- iPOS generates audit trails of any stock changes in the system
- Keeps track of mismatches between physical stock and database
- Supports stock validation

Multiple warehouses

- iPOS provides clients with the ability to specify physical product location in cases where they have multiple warehouses or stores.
- iPOS also enables stock requisitions from one ware house to another
- iPOS can also be used to facilitate stock transfers between warehouses

- iPOS inventory management module provides many intuitive ways for managing, tracking and correcting inventory stock ensuring your physical stock matches that of your database.
- The inventory management module of iPOS also takes care of product batches and their attributes such as serial number, manufacturing dates, expiry dates in your stock

- iPOS provides clients with the ability to specify physical product location in cases where they have multiple warehouses or stores.
- iPOS also enables stock requisitions from one ware house to another
- iPOS can also be used to facilitate stock transfers between warehouses

Product Management

- Keep track of every product across all outlets
- Easily transfer product from one outlet to another
- Easily do PUSH and PULL operations from your warehouse
- Easily export and import product list from excel
- Easily make stock entries correction; audit trail helps keep track of changes
- Easily check-in and checkout products transferred to or from one outlet to

- another or from a stock (warehouse) to outlet.
- Capture all essential product attributes such as manufacturing date, expiry date, batch, batch serial number, supplier, unit price, wholesale price etc.
- Supports multi-channel selling
- Supports product barcode and many more.

Retail Accounting

- Auto generation of financial accounts such as sales, purchase, customer account, supplier account, sales account, petty cash etc.
- Easy integration with Bank account and payment gateways for different payment options.
- Supports accounting books keeping and ledgers.
- Supports quick and easy generation of balance sheets, profit and loss accounts with a few clicks.
- Smart and quick billing
- Cash register / Terminal cash register integration
- Multi-channel selling and many more.

Customer Management

- Supports customer's enrollment (create, edit and view customers profile)
- Track customers account
- Supports customer's loyalty programs
- Supports customer's referral points
- Contact management
- Supports tracking of customers' needs/ requests/ complaints
- Customers response
- Customers satisfaction
- Track customers' retention and many more
- Supports customer loyalty system/programs
- Customers birthday reminders/ auto greetings

Pill Reminder

Non-adherence to medication is a major health burden especially in the elderly population and in cases where the medication has to be administered by another person. An automatic pill reminder helps people across all age groups to improve adherence to medications.

Our Pill Reminder comes as a standalone mobile app and also as a web module of our iPOS solution specifically designed for Pharmacies, Hospitals and patients. It allows the user to get personalized reminders in the form of push notifications, SMS and email for each of your medications when due.

Some features include:

- Automatic medication tracking
- Medication history and insights
- Notify loved ones/guardians when medications are missed

Fasttrack Logistics

FastTrack is a custom Logistics Management Solution bundle, designed to manage your logistics operations.

The solution bundle comes in the following access channels:

- Web (for business owners and customers)
- Mobile App (Android and IOS)
- WhatsApp Chatbot

The FastTrack Logistics solution is embedded with an intuitive and highly customizable reporting dashboard that provides exclusive and unique insights on all logistics operations and key activities for

both customers and business owners. The solution also provides an admin backend through which the business owner/admin can control and manage the business using modules like the dispatches, expenses, teams, locations, routes, fleets, vehicles and user's modules as well as view and export periodic reports.

Why FastTrack?

The implementation of our solution would not only provide a competitive edge for your business but would as well enhance customer experience, retention, boost revenue generation and increase your clientele. The solution captures and manages all processes involved in the delivery lifecycle

from the pickup point to the point of delivery with details of all the actors involved for effective tracking and reporting in real time.

The solution is robust, scalable and ergonomically designed to:

- Enhance customer experience
- Automate and optimize operational processes,
- Provide operational and business insights using analytics and BI tools,
- Track delivery in real time
- Provide powerful reporting dashboard

With a unified administrative dashboard, the solution is accessible via web, mobile app and WhatsApp chat bot to enable your customers easily access your services.

Our solution is cost effective, user friendly and highly customizable embedded with an administrative back end designed to enables business owners manage their business seamlessly.

Additional Features

- Delivery agents and admin receive SMS, emails or push notifications whenever tasks are assigned to them or accepted.
- When a delivery has been successfully made, the agent collects a proof of delivery by capturing details of the recipient and the customer gets immediate alert.

- Smart Routing for Agents which enables the agents to pick up an order and deliver within the shortest delivery time using route optimization algorithm.
- Admin and customers are able to track in real time the delivery agents including determine the estimated delivery time.
- An Executive Reporting Dashboard embedded with analytical and business intelligence capabilities that provide a bird's eye view of all key metrics to determine the performance of all aspects of the business and also enable management make informed decisions using data.
- Expense Manage module that enable business owner keep track of all expenses incurred on the fleets.
- Application Programming Interface (API) which helps in integrating the solution with your corporate client's systems.

Food Order Management Solution

This is an online Food Management and Delivery Solution (Web and Mobile) designed to displays and manage various foods and drinks menu with images for the customers to view, place order and have the order delivered to any location within the service coverage area of the vendor.

The solution enables restaurant owners to make assessable their menu to the desired customer with a click at the same time managing their deliveries.

Comprising of both the customer user interface and the admin back end, the customer user interface and its various functionalities are accessible via a web browser, installed as a mobile application on Android or Apple IOS devices and also an interactive WhatsApp chat bot.

Using these functionalities, the customers can:

- View and search all available menu items and prices
- Place order and make payment using available payment options
- View order history
- Create and manage own account
- Rate a menu item
- Track order delivery status

The admin backend accessible via web and mobile application enables the business owner/ admin;

- Set up and manage user accounts
- Set up menu categories
- Set up menu items (meals) and their respective prices
- Set up delivery options (pickup and delivery location) with applicable prices
- View and process orders
- View and print reports/Receipts.

Why Chose Our Food Order Managment Solution?

Adoption of the Solution will provide among other benefits, the following:

- Increased sales and revenue
- Enhanced customer experience
- Enhanced productivity
- Enhanced business insights through analytics
- Increased customer reach

Electronic Document Management System (EDMS)

Satisfied Clients:

Federal Roads Maintenance Agency (FERMA)
Nigerian Export Processing Zones Authority (NEPZA)
Federal Capital Development Authority (FCDA)

System Description:

The Electronic Document Management System (EDMS) is a category of software application that handles document storage/ archiving and retrieval electronically via a web browser. The solution can be hosted on cloud or deployed on premises to be accessed only within your organization and on your intranet. The solution can be deployed with workflow implementation depending on your requirements; the workflow module allows and defines how a document is transitioned from one office (user) to another. It handles various document security checks depending on your organization structure and policies on the movement of documents and files.

Advantages of Implementing EDMS

Increased efficiency & productivity

- EDMS increases staff productivity and efficiency by reducing the time spent on searching for documents and moving physical documents from one office to another.
- Cases of missing documents are eliminated since there is no longer a need for document refilling

increased security & control

- Access to sensitive documents is restricted by the system and all access can be tracked and traced
- The system roles and permissions on each document or cabinet help to identify who retrieved what document and when

enhanced document searching capabilities

- Document indexing allows the users to easily find documents and information on the system
- Document tagging also enhances the search capabilities of the system
- With the OCR feature, different types of documents can be easily converted into editable and searchable data.

improved task management

- The system's task management tool allows tasks to be assigned to users.
- The workflow capability also allows users to route documents throughout the organization while tracking their progress

e-Rules

The E Rules is a one stop shop for quick access to legislative materials electronically via mobile devices. The system serves as a one stop shop for legislative information and resources needed in carrying out legislative duties. Designed for legislators; its enhanced search capabilities make it possible to find any information in seconds.

The solution has been in use since the 6th Assembly (2007), 7th Assembly (2011) and 8th Assembly (2015) for all sittings.

The E-Rules House is a secured platform available to only legislators and nominated aides. Its built to be deployed on the Android, iOS and windows platforms. Some of its important features include;

- **Order Paper:** List and allow access to the House order papers and other relevant documents as might be provided and used during sittings. This includes, but not limited to Curriculum Vitae of people to be screened for national offices.
- **Bills:** List and allow access to all bills of the house since 1999. It provides a functionality to add footnotes when needed.
- **Acts:** List and allow access to the all Acts of Assembly.
- **The Nigerian Constitution:** provides access to an electronic version of the Nigerian constitution.
- **Maps:** the feature contains the maps of Nigerian Geo-Political Zones and States of the federation as well as a tabular list of these states, their slogans, capital cities, boundaries, local government areas, land mass, geographic locations etc.
- **Electoral Act:** provides access to the electronic version of the electoral act.
- **Charts and Tables:** Contains all statistical charts and tables including the latest census data, states total local government areas, population growth rate etc.

Uniplus

UniPlus is a mobile solution developed to automate campus activities with a view to improve campus learning and social experiences.

UniPlus enables interaction within the University community. It is designed with some unique features that cater for the daily needs of students, enhance communication and serve as a collaborative reporting platform while integrating M-Commerce. It also serves as a platform for the University community and the general public to keep track of the university activities.

Some key features of UniPlus include:

- News: The news module provides users with information on the go
- Alerts: Using your smart phones, users can get alerts on predefined activities
- Directory: This module provides access to relevant school contact directories
- Student Services: Services offered and accessible to students such as academic materials, timetable, MyResults etc,
- Campus Tour
- Library information
- Resource Download etc.

News Management Solution

Our news management solution enables our target audience publish, distribute and manage news, articles etc on a variety of websites. Our solution is embedded with a variety of modules that not only allows for the automation of the content creation and distribution process across digital marketing channels, but also provides additional benefits described in the modules listed below.

Modules of The News Management Solution

- **Content Management System** – a highly customizable administrative console, is embedded with tools to efficiently manage website content while allowing for the configuration of additional modules for additional functionality
- **News Management** – this solution is a news and publishing solution that can be configured on any website for the rapid dissemination of press releases, news articles etc.
- **Technology Plugins** – the news management solution works perfectly with technology frameworks such as WordPress themes for an extremely streamlines UI/UX experience
- **Directory Management** – registries and categories of all kinds can be easily configured and managed using our news management solution
- **Forums** – our news management solution also supports bulletin boards and discussion forums which could easily serve as the perfect location for your online community to share content and engage with each other
- **Analytics** – with our embedded analytical tools and software, we provide data driven metrics which enable our business partners make informed business decisions

OUR SERVICES

"It is not the strongest species that survive, nor the most intelligent, but the most responsive to change."

Charles Darwin

Software & Enterprise Solutions

We pride ourselves in the design and development of software and enterprise solutions that meet the specific needs of your organization and also those targeted to solve a specific market or organizational problems. These include the following categories of solution;

Custom/Bespoke Software Solutions:

Understanding the specific challenges faced by our customers is our top priority when it comes to providing effective solutions to address these business challenges. Following the specific needs of our customers and the nature of their business, we design and develop cutting edge software solutions to address their needs and ensuring a positive ROI. These solutions could be Desktop Applications, Web Applications, Middleware and Mobile Applications sometimes a combination of two or more of these categories.

Commercially Off the Shelf (COTS) Solutions:

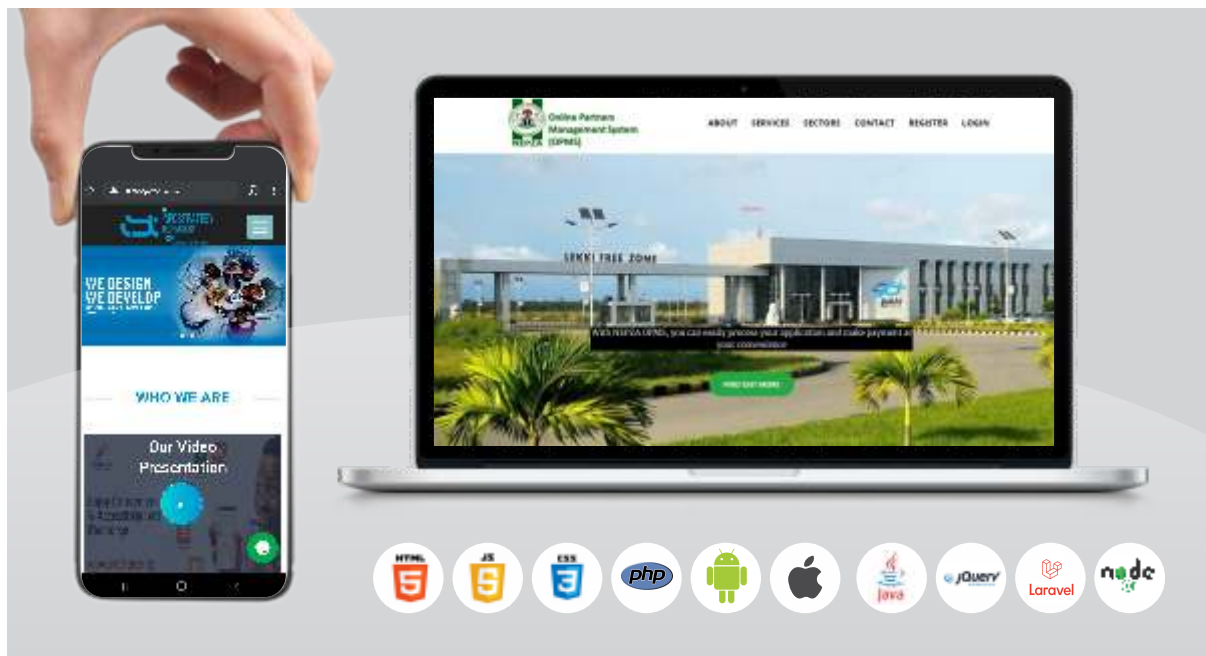

Sometimes, there are ready designed and developed software solutions in the market

which are best suited for some businesses or organizations or the users are already familiar with. In some cases, we make recommendation of such solution to address the specific need of our customers and go further to deploy and customize the recommended solution (if customizable) to address their specific needs or requirements.

Mobile Application Development:

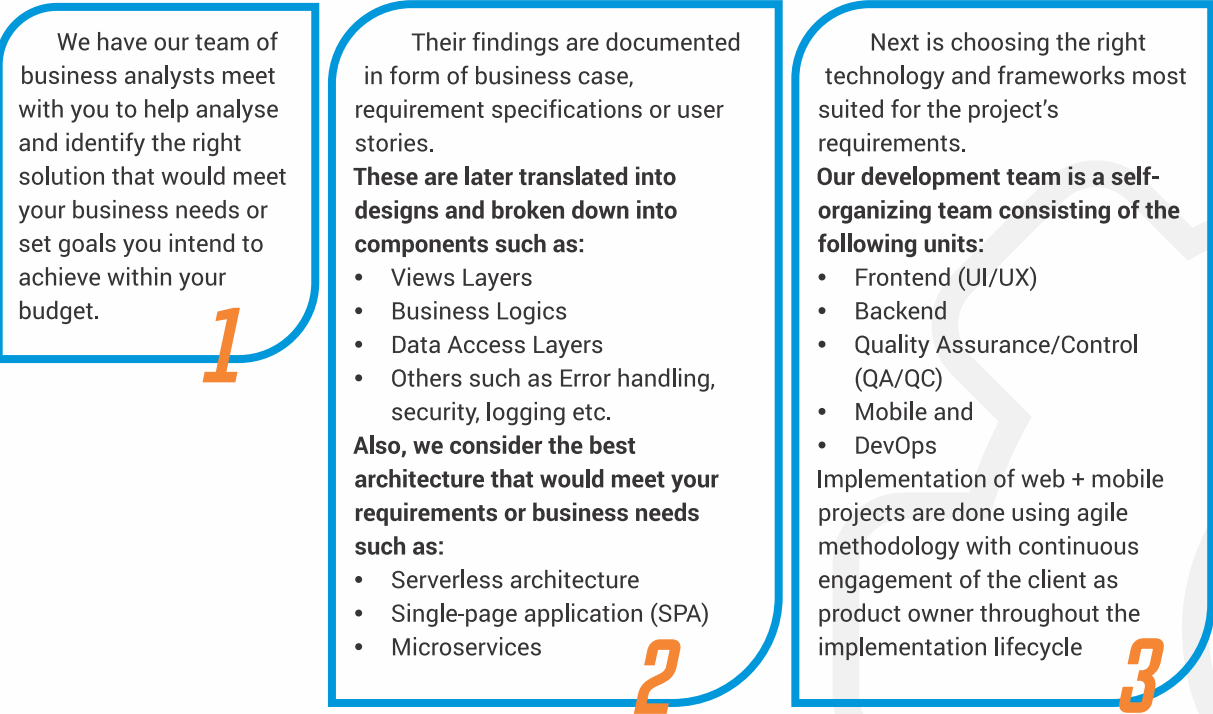

We develop mobile applications compatible with either android, IOS or both depending on your business needs. We often offer this services as a bundled package with web application services fully integrated and hosted on a server of your choice. Our mobile applications are developed as mobile web, a native mobile application or hybrid mobile application. Our versatile and experience Dev Team ensure mobile application development projects are executed in accordance to industry best practices in UX/UI design, functionality and usability guaranteeing customer satisfaction

Web + Mobile Solutions

When it comes to ergonomic and user friendly web and mobile applications design, we are the right team for you. Be it a native, web or hybrid application, depending on your needs, using cutting edge technologies and frameworks, in compliance with industry best practices, we deliver excellent and efficient solutions tailored just for your needs.

Some insights into our journey on how we deliver just the right solution to for your needs:

We Design We Develop

cutting edge software solutions to address customers needs.

Technology Consulting

Our technology consulting team provides the top gears that help our clients deploy solutions and infrastructure that improve business and organizational processes while addressing the challenges associated with Information Technology. We understand new disruptive technologies and we have the skills, tools and methods to help you gain speed and agility while integrating and maintaining traditional approaches and technologies. Our team work end-to-end across all IT dimensions, from strategy, architecture to framework designs, policies to standards and best practices on implementation approaches and methodologies; we deliver overall transformative outcomes.

Our IT consulting services are the first step toward transforming your business or organization and improving efficiency. Our team pride in the industry experience and best-in-class tools and frameworks deployed to methodically assess your entire business or organizational processes and operations. We look at your IT infrastructures and support services holistically, identifying improvement areas that will have the greatest impact on employee productivity, service levels and customer satisfaction.

Technology Procurement

Are you having challenges in procuring Information and Communication Technology infrastructure?

Infostrategy Technology is your preferred partner. Allow us to handle all your technology needs while you focus on your primary business operations. We have global Original Equipment Manufacturers (OEMs) Partners to ensure we deliver to you the latest cutting edge technically engineered infrastructures at cost effective prices to meet your specific needs.

We are not only available to procure your ICT infrastructure needs, partnering with us gives you rest of mind as we continue to manage your infrastructures (maintenance and technical support) to ensure your systems has a minimal downtime.

“Our **Business Intelligence** tools are designed in line with **Industry Best Practices** to maximize efficiency and **Return on Investment.**”

Some of our Partners

Business Automation

At Infostrategy Technology, we understand the need of our clients to embrace automation of their business processes in order to improve overall efficiency and maximize return on investment and also how to address the peculiar challenges associated with the process of automation.

We develop software applications for all size organizations and businesses that automate their processes using workflows designs with business intelligence, analytics and collaboration features.

We know exactly how to leverage the cutting-edge technology solutions to generate more revenue for you and create greater value for your customers.

Partnering with us to automate your business process would enable you to;

- Augment your business with better productivity.
- Identify gaps and improvise them for a flawless business process.
- Accelerate performance.
- Optimize resource utilization by saving on time and cost.
- Enjoy better engagement of resources.
- Streamline documentation process for a shorter delivery cycle.
- Better Customer Service and Satisfaction
- Increased Efficiency
- Improved Accuracy
- Full Audibility and Tracking

Enterprise Resource Planning (ERP) Solutions

When it comes to having a one stop-shop with a centralized access to all your organization software applications or fully automating all your business processes and operations, we recommend an ERP solution.

Are you ready to fully automate all your business processes or operations but low on budget to afford an ERP solution in the market? Worry less, we pride in designing and developing bespoke ERP solution that is specifically tailored to address your unique operations or business processes.

Our ERP solution modules include but not limited to the following;

OUR SERVICE DELIVERY STRATEGY

" In our industry, being the first in a market is not everything. CUSTOMER LOYALTY IS. And loyalty is not won by being first. It is won by being BEST. "

Stefan Persson, Chairman, H & M

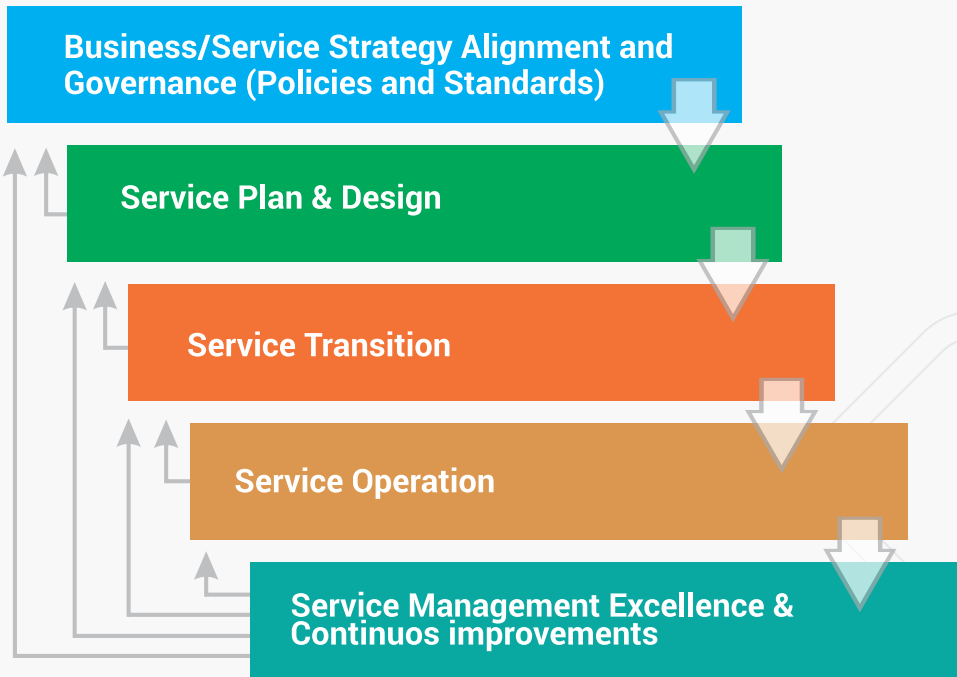

Our Service Delivery Strategy

We work and collaborate with our clients through every phase of the service delivery lifecycle from business analysis through design and development of customised software applications, deployment and post deployment support.

We also offer our clients a range of IT consultancy services in no way limited to:

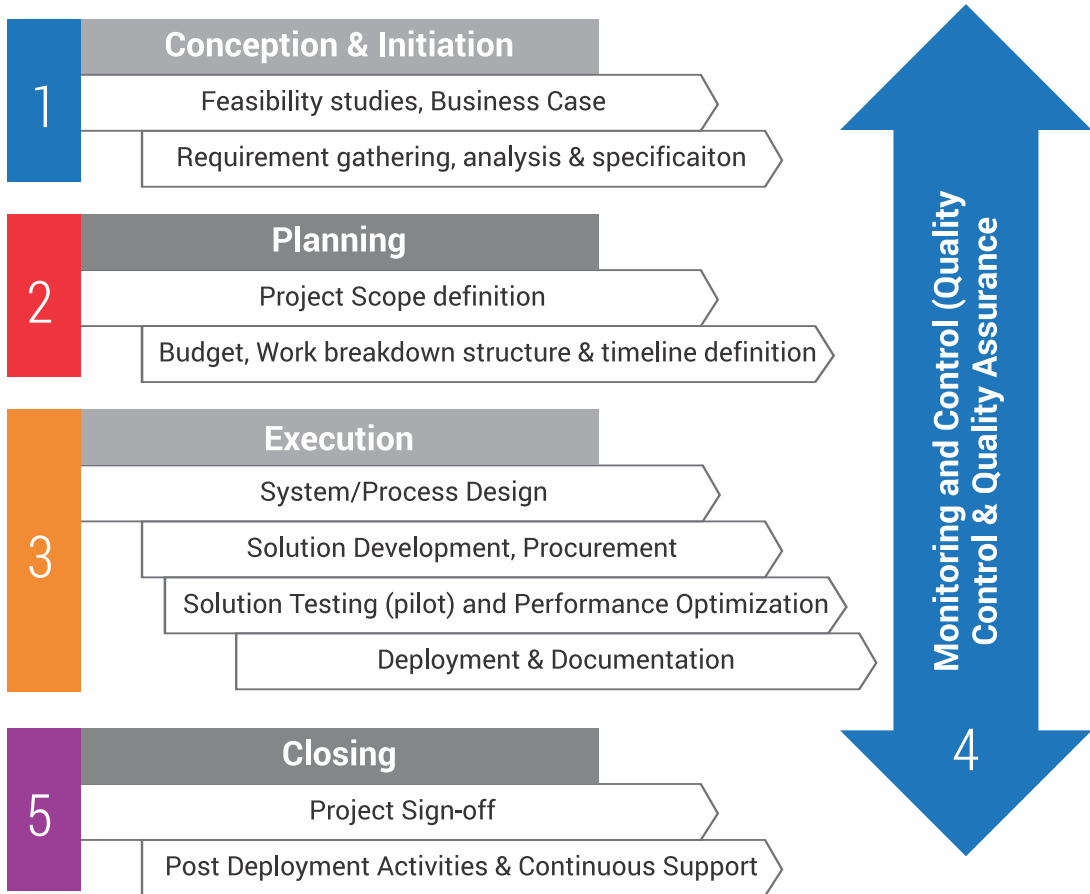

- Business process design and automation
- Workflow design and implementation
- IT Infrastructure procurement
- System integration, maintenance and management
- Desktop application development
- e commerce system development and deployment
- Mobile apps development
- Project management services
- Packaged software selection and implementation
- IT security services
- Web sites and web application development, deployment & maintenance
- Software migration services

We are committed to service excellence through a combination of experience, training, proven best practices and compliance with industry standards. The framework below provides an overview of our process flow framework for service delivery;

Our Project Implementation Approach /Strategy

Vital to the success of implementing any of our initiatives is the implementation strategy. Our team of experts work together with the clients to define the implementation strategy that best suits the project owner's organization and its business processes to deliver the expected results. Irrespective of the business scenario, the adopted methodology to be used; implementing a solution usually involve the following core processes:

Conception and Initiation

This is the first phase in the implementation of any of our services, products or solutions. Our business development team and system analysts at this point work collaborative with the client to fully understand their needs and have a proper business case defined.

Also at this phase; a business/ technical proposal, solution concept notes, contract agreement and all other relevant documents that define the feasibility and authenticity of the project is dealt with. At the end of this phase, we would have a clear understanding and an officially signed agreement on what are to be achieved.

Planning

This phase of implementation involves identifying and defining the processes and governance to keep everything running smoothly throughout the implementation lifecycle.

At this phase, we anticipate everything to be done to achieve success not neglecting the possible risks that may be associated with the project and how they would be mitigated. It's the process to establish the steps required to define your project objectives, clarify the scope of what needs to be done and develop the tasks and resources (People, Material and Equipment) required to do it.

Execution

At this point, all that has been planned is being implemented to achieve the set objectives. All resources are put in place, ensuring that all the activities are carried out within the defined timeline and scope.

Monitoring and Control

The activities at this phase of implementation cut across other phases, to ensure that the deliverables are within scope, quality and timeline. The implementation monitoring and control activities feed primarily in and out of the Planning and Execution processes. This enables us to ensure quality delivery. Some of its activities would also demand feedback from the clients through demos and reviews to ensure that the product/solution meets their needs.

Closing

At this phase, we are at the point of wrapping up the implementation process. All deliverables must have been met. The client would have to sign off having been satisfied and all relevant documents are being handed over to the client.

We don't just close the project; we ensure continuous improvement!

PROJECT PORTFOLIO

“ There is no alternative to digital transformation. Visionary companies will carve out new strategic options for themselves – those that don't adapt, will fail. ”

Jeff Bezos
Amazon

Project Title	Design, Development, Supply and Implementation of 400 Mobile Version of E-Rules and Ethics Application System for the House of Representatives
Client	National Assembly 
Duration of Implementation	6 Months
Project Objective	The primary objective of the project was to make provision for easy access of information to the assembly members via a Mobile Application and as well procure smart devices on which the application would be install.
Project Description	<p>The project involved the following scope of work;</p> <ul style="list-style-type: none">• Development and Deployment of E-Rule and Ethics Mobile Application Version• Supply and Installation of Mobile Devices

Project Title	Development and Deployment Of Biometric Enabled Database Management System For FCT Resettlement And Compensation Schemes
Client	Federal Capital Development Authority (FCDA) 
Duration of Implementation	April 2018 – October, 2018
Project Objective	FCDA's department of Resettlement and Compensation was desirous to automate their process of capturing data and information of resettlement schemes beneficiaries using a biometric enabled solution.
Project Description	<p>The Biometric Enabled Database Management System is a robust application that is designed to work both offline and online. The system is designed primarily to manage the resettlement and compensation activities of the FCDA from the project information to beneficiaries of a project. It also captures the socio economic and household information of the beneficiaries, their biometric data, valuation of their properties (physical structure, crops and economic trees) and automatically valueate their estimated compensation value.</p> <p>The offline version of the application enables the valuation officers to work on field where internet connectivity might be a challenge.</p>

Project Title	Contract for the Provision of Information Communication Technologies (ICTs) And Electronic Health Record System to Secondary Healthcare Facilities in the South West Zone of the Country.
Client	Universal Service Provision Fund (USPF) 
Duration of Implementation	April 2019 – October, 2019
Project Objective	USPF designed the E-Health project to provide ICT infrastructure and Electronic Health Record Systems to secondary Healthcare Facilities in the various geopolitical zones of Nigeria. This is aimed to provide a more efficient patients record management and ease of access to patient information electronically.
Project Description	The project involved the following scope of work; <ul style="list-style-type: none">• Deployment of Local Area Network with VSAT broadband• Development and Deployment of Electronic Health Record Management System• Supply and installation of ICT equipment (servers, computer system, printers and scanners)• Supply of furniture for the various offices• Set up of an ICT office in the hospital• Training of end users and management staff

Project Title	Computerization of Finance and Account Department
Client	National Commission for Museum and Monuments 
Duration of Implementation	December 2019 – February 2020
Project Objective	To computerize the activities of the Finance and Account department of the commission through; <ul style="list-style-type: none">• Deployment of a Wireless Local Area Network• Deployment of an Enterprise Server• Procurement of laptop computers• Deployment of Standard Accounting Solutions• Deployment of Fixed Asset Schedule (FAS) Solution• Training of Staff on Accounting and FAS Management processes
Project Description	The project included the procurement and deployment of network infrastructure to provide the Finance and Account department of the Commission a reliable, secured and long range wireless Local Area Network Access. An enterprise grade server was deployed, configured to host the Accounting and Fixed Asset Schedule solutions on premise and accessible to staff of the Finance and Account department through a secured wireless network which provided them a more efficient and effective way to manage, store and retrieve the accounting and fixed assets data/information.

Project Title	Supply and Installation of Electronic Document Management System (EDMS), Partner Management and Online Services (OPMS)
Client	Nigerian Export Processing Zones Authority (NEPZA) 
Duration of Implementation	December 2017 to May 2018
Project Objective	The Project was primarily designed to serve as a pilot to the automation of all NEPZA business and operational processes.
Project Description	<p>The project involves the design, development and deployment of EDMS and OPMS on the NEPZA's Local Area Network (LAN) as well as providing online access.</p> <p>The online partnership management system is an enterprise grade application designed to manage all NEPZA partner's activities such as registration of new zones, new enterprises, renewal of operating licenses among others.</p> <p>Registered partners do have their profile on the system where they can manage their applications and get status update on each application in real time. It includes push notification on events, email and sms notifications with user friendly and infographic dashboard.</p> <p>The system also supports workflow on the services provided by NEPZA; user roles and permission with high level security and integration of TSA payment gateway.</p> <p>The second phase of the project involves full automation and integration of all NEPZA's operational processes across all boards (Head office, State and Zone Administrative offices) to an Enterprise Resource Planning (ERP) solution.</p>

Project Title	Contract for the Active Directory Services, Lync SharePoint Configuration
Client	Federal Roads Maintenance Agency (FERMA) 
Duration of Implementation	December 2016 – October, 2017
Project Objective	FERMA needed to deploy a seamless Microsoft Technology that would allow the control and monitoring of all staff activities on the network within the organization. The project was also designed for automation of their documents management, storage and archiving through the implementation of an Electronic Document Management and Archiving Solution and as well provide security for all users on the FERMA Headquarters Network using Firewall. The project also involved the deployment of Microsoft Email Services (Outlook on Premise and O365) for a unified email communication among the staff at HQ and the various state and zonal offices.
Project Description	<p>The project involved the following scope of work;</p> <ul style="list-style-type: none">• Licensing and Configuration of Active Directory Services• Development and deployment of Electronic Document Management and Archiving System (EDMS) across 12 regional and state offices of FERMA• Scanning of over 15,000,000 legal documents from across the 12 regional and state offices of FERMA• Licensing and Configuration of Lync SharePoint• Licensing and Configuration of Microsoft Officer 365• Licensing and Configuration of Microsoft Lync X• Licensing of Enterprise Mobility + Security• Licensing and Configuration of Microsoft Outlook (On Premise)

Project Title	Procurement of Personnel Management, Security and Operating System Software
Client	Federal Roads Maintenance Agency (FERMA) 
Duration of Implementation	December 2016 – March, 2017
Project Objective	The primary objective of this project was to deploy an Enterprise grade Human Resource Management System integrated with Payroll, Attendance Management (clock-in, clock-out with biometric enabled devices) and Security and operating systems licenses for FERMA HQ and zonal offices.
Project Description	<p>The project involved the following scope of work;</p> <ul style="list-style-type: none">• Development and Deployment of Human Resource Management System• Deployment of Security Operating System Software (WatchGuard Firewall Server and Security Management Suit)

Project Title	Design, Development and Deployment of a custom integrated retail management solution (iPOS)
Client	Tonia Pharmacy & Superstore, Tonia Medical Laboratory 
Duration of Implementation	4 Months
Project Objectives	<p>To deploy a custom retail management system with the following functionalities:</p> <ul style="list-style-type: none">• Inventory management• Customer data/information management• Point of Sale• Accounting• Reporting• Pill reminder• Laboratory tests and management
Project Description	<p>iPOS is a custom Retail Management System (RMS); a platform that combines several useful tools to aid in running a retail store or chain, such as inventory management, point of sale (POS), accounting and customer relationship management (CRM).</p> <p>The solution is tailored to suit the business needs of Tonia Pharmacy and their specific standard operating procedures (SOP). It manages their respective branches independent and provide inter branch connections for collaborative sales.</p> <p>The solution also has some custom modules such as;</p> <ul style="list-style-type: none">• HMO: manages all their registered HMOs• Partner Hospitals: manages all hospitals registered with Tonia Pharmacy for drug administrations with prescription management.• E-commerce: an e-commerce module that support the purchase of OTC.• Pill Reminder: help registered customers to manage their medication and reminders and alerts

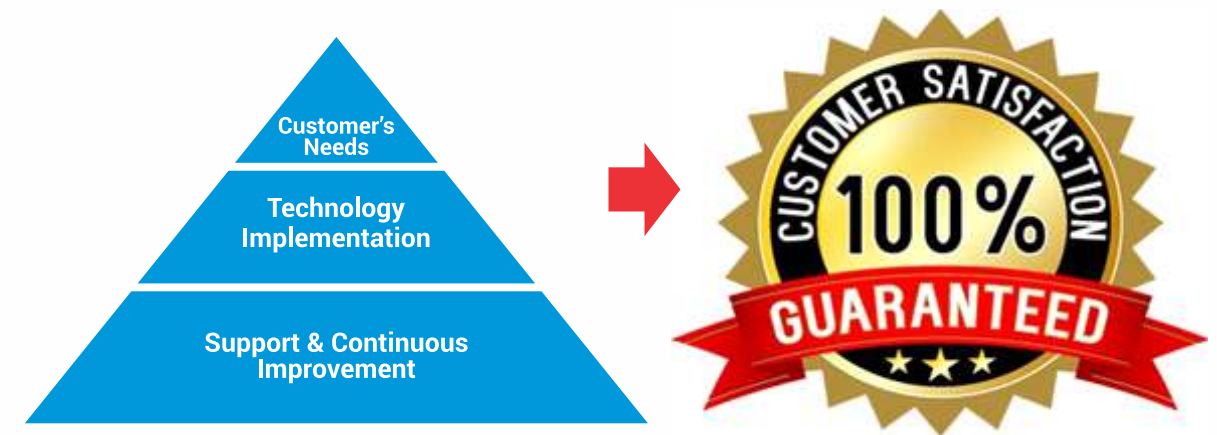

Project Title	Deployment of Cloud Hosted Enterprises Messaging /Collaboration Email Platform
Client	National Agency for the Control of Aids (NACA) 
Duration of Implementation	November 2020 – November 2021
Project Objective	Planning, deployment and maintenance of Microsoft Office 365 services for the provision of Cloud Hosted Enterprises Messaging /Collaboration Email Platform amongst other suite of services
Project Description	<p>The Microsoft Office 365 Enterprise deployment entailed the:</p> <ul style="list-style-type: none">• Provision of 400 user email boxes, 50 GB mailbox storage capacity, Mail Antivirus and SPAM Protection, Integrated SMTP Gateway/Firewall, Native Chat and Videoconferencing, Mobile Synchronization• Outlook Web Access, Unified Communication Integration, Outlook Synchronization ZCO, Shared Calendar• Email Archiving and Discovery, Media Galleries, Photo and Video Embedding• Events and Polls, People Search and Content Search, Technical Support and Maintenance SLA 24/7, Automatic Fail - Over to second layer cloud Hosted Server, 99% service availability, One year hosting

WHY CHOOSE US?

“Excellence must be achieved through the eyes of those who judge us; once achieved it can only be maintained with constant innovation.”
Tom Collins

Customer Satisfaction

At Infostrategy Technology, we place our customers' needs first. Our unique ability and strategy to address the needs of our clients and proffer cost effective solutions that would guarantee a healthy return on investment has given us competitive edge in the Information Technology industry in Nigeria and Africa at large.

Our teams are driven by a client focused culture. This enables us to ensure that the IT solutions and services offered are tailored to address the specific needs of our clients within defined scope, budget and time.

Industry Experience

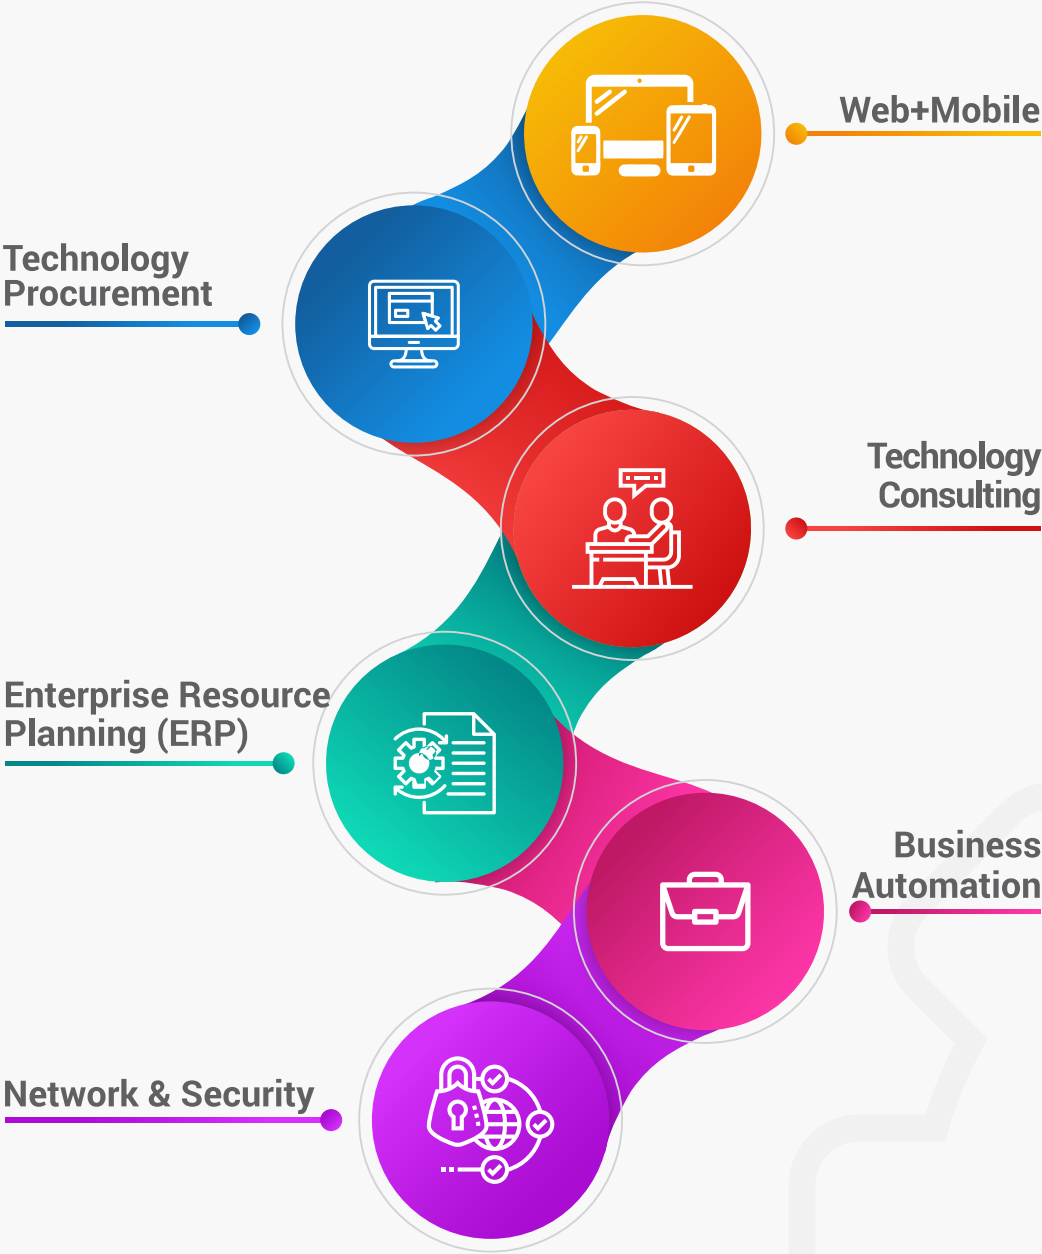

With over 17 years of continuous growth, we have gained experience in a wide spectrum of technologies design, development and deployment especially the application of Information Technology in the design and development of business solutions, business automation and enterprise grade applications (desktop, web and mobile) for different industries and businesses of various sizes.

The people at Infostrategy Technology consist of a unique blend of result oriented young minds with a passion for unparalleled excellence. We are a mix of technology experts, creative and innovative millennials with business acumen and technology leadership.

We are experts and professionals with vast experience and different skill sets across our line of businesses.

In addition to the various team members' vast experience and knowledge, IST is a place for continuous learning and career growth. Our teams at all times demonstrate exceptional level of professionalism and excellence in discharging their assigned responsibilities.

17+ YEARS OF INDUSTRY EXPERIENCE

Our Technology Stack

Java

JDK, J2SE, J2ME, JavaSE, JavaEE, JavaFX, Groovy, AWT, Swing, Applets, Java Beans, JNDI, JCE, JavaMail, JMF, JMS, JMX, JTA, JAXP, JiBX, JAAS, OC4J, JNI, RMI, JDBC, JCO, JCA, Servlets, JSP, J2EE, JavaEE5, EJB, Spring and all modules, dependency injection, inversion of control Struts 1 and 2, JSF, SpringMVC, Grails, Cocoon, Velocity, Tapestry, JSTL, JoSSO, Axis 1.x, Axis 2.x
ORM: JPA, Hibernate, TopLink, JDO, GORM
Adapters, Connectors, JCA, Neco/XHTML
JavaCC, SableCC
Java WebStart
FOP, Batik, Saxon extensions and contributions, XSLT/XSL-FO
Ant, Maven, xUnit, Jenkins, Continuum, Bamboo

.NET

Microsoft .NET Framework (versions 1.0 – 4.5)
.NET Compact Framework,
ASP.NET and ASP.NET MVC, C#.NET, VB.NET, ADO.NET, EntityFramework, LINQ, Azure, WPF, SilverLight, Caliburn Micro
Windows Forms, C# and J#, XML and Web services,
ASP VBScript and JScript, CGI, Infragistics NetAdvantage, Microsoft Sharepoint, BizTalk 2003+ InstallShield

PHP Backend

Web servers: Apache, NGINX, and IIS
Databases: MySQL, Oracle, MS SQL Server, PostgreSQL, SQLite, NoSQL, MongoDB, Redis, and CouchDB

Frameworks: Zend, Symfony, Yii, CodeIgniter, Laravel, and CakePHP

Frontend

HTML/CSS, JavaScript, jQuery, Backbone.js, AngularJS, React Redux, Node.js, RequireJS, ExtJS, Prototype, AJAX/JSON

Mobile

IOS: Objective-C, Swift, C/C++, XCode, AppCode, iOS SDK, CocoaPods
Android: Java, Kotlin, C/C++, NDK, Android SDK, Eclipse, Android Studio, Gradle, Maven
Windows Mobile: C#, C/C++, .NET, XAML, Visual Studio
Tizen: C/C++, JavaScript, HTML, Tizen Studio
Cross-platform: C/C++, C#, Xamarin, Xamarin.Forms, .NET, XAML, Visual Studio
Hybrid: PhoneGap, Cordova, JavaScript, HTML, HTML5, jQuery, jQuery Mobile, Sencha Touch, Ionic

C/C++

Shell Scripting, PERL scripting, Win API, COM, DCOM, MFC/WTL, STL, ATL, DDK, C++ REST, SDK, GDI, GDI+, GCC, QT, Boost, NDK, GTK+, wxWidgets, POSIX, DirectX, OpenGL, OpenAL

Python Backend

Framework: Django, TurboGears, Web2Py, Pyramid
Micro Framework: Flask and Bottle
Advanced Content Management Systems: Plone and django CMS

Ruby Backend

Framework: Ruby On Rails
